Refrigerant / HALON Leak Detectors

Part #VV1
\$55.50 EA

TIF® Leak Detector Halon/Refrigerant
#H25-720 \$416.70

Replacement Tips 3-Pack
#H25-713
\$67.90 Per Pack

Battery Life: Approx. 30 hrs
Ultimate Sensitivity : <0.1 oz. per year (3 gr/yr)
Visual Leak Indication Levels: 18 (tri-color)
Sensitivity Levels: 7
Product Weight: 3 lbs.
Dimensions: 2.81x11.50x10.31 inch
Warranty: 3 years
One touch Reset, Mute Button, SAE J1627, UL Classified

The Vapor•Vue™ is a visible vapor charging device that absorbs heat naturally and flashes the liquid refrigerant from the cylinder and charges into the system as a vapor. Connecting the Vapor•Vue™ to the low side of your charging manifold will increase the charging rate up to 8 times faster and the liquid is controlled by adjusting the manifold valve and monitoring the vapor rate through the double sight glass. Vapor•Vue™ is factory pressure tested at 800 psi and can be used to charge any refrigeration system & air conditioning system using R410A, CFC, HCFC & HFC, Zeotropic and Azeotropic refrigerants without the danger of liquid slugging and destroying the compressor. Placing the manifold & Vapor•Vue™ over hot discharge airflow of the condensing unit will increase the heat exchange and charging rate efficiency. Patent pending.

UV LED Light, Leak Detection System for Refrigerants Only

LeakSniper™. This system is designed to provide the technician with an accurate diagnostic tool used to detect leaks in A/C units and refrigeration systems. Find leaks fast when you add a small amount of fluorescent dye to the A/C and refrigeration system. The universal dye is compatible with all refrigerants and oils used in these systems. The dye is injected into the AC&R system while under pressure. The dye circulates with the refrigerant's oil and escapes from the system at all leakage points. When the dye is exposed to the UV LED light from the Leak Sniper™ swivel light, the leak source glows a bright yellow green. Even the smallest leaks are detected with LeakSniper™.
