

BCR Satin Buffs are constructed of non-woven abrasive material pulled down into a metal clinch ring. This construction allows for great side-to-side flexibility along the work face, making them ideal for operations where they are stacked together with spacers between each section on a pedestal grinder. This creates an inexpensive flexible finishing wheel as wide as you like it!

BCR Satin Buffs are used to attain satin finishes on pedestal grinders where flexibility is required because of the contours of the part. They can be used with or without the use of compounds.

FD Satin Buffs are made from small diameter discs of non-woven abrasive material adhered together with a canvas center. 1/4" standard arbor holes allow these flexible, small wheels to be screwed on tapered spindles for light cleaning and finishing jobs.

FD Satin Buffs are a very inexpensive way to polish the inside of stainless steel tubes and clean & finish Jewelry castings.
