

Non-Sparking / Non-Magnetic Corrosion Resistant Ampco Safety Tools

What are Safety Tools?

Safety hand tools are specially engineered for use in safety-sensitive applications to reduce the risk of injury to the user. Ampco Safety Tools are produced from materials that have a reduced risk of generating sparks, which can result in a fire or explosion, causing personal injury and/or property loss. These unique tools are often referred to as "non-sparking," or "spark-reduced" safety tools. Ampco Safety Tools offer the additional product features of being non-magnetic and corrosion-resistant.

Commonly used hand tools are made from steel alloys that can emit mechanical sparks that are hot enough to ignite most flammable or combustible materials. Non-sparking, or "spark reduced" hand tools generate only those sparks sometimes referred to as "cold sparks." These cold sparks have a low heat level and do not even ignite carbon disulfide, which has the lowest ignition point of any substance known to man.

Government organizations such as the Occupational Safety & Health Administration (OSHA), the Department of Energy (DOE), the National Fire Protection Association (NFPA) and MSHA (Mine Safety & Health Administration) require or recommend the use of non-sparking hand tools in many industrial applications. For example, petroleum & chemical manufacturing, explosive and blasting agents, the marine industry, the mining industry, the paper industries, and spray booth operations, just to name a few, all require the use of non-sparking hand tools to eliminate fire and explosion hazards. Test & Approval: Conforms to the requirements of the Bureau of Indian Standards, the Mine Safety and Health Administration, and the National Fire Protection Association
